The **Freedom Smartscreen** is the ideal insect screen for your servery or outward opening windows. Simply slide up when not in use then lower it to keep the insects at bay.

Flush counter tops or bars do not require any additions or rework to spoil their smooth surfaces as the screen uses a brush strip to gently seal the lower edge.

For effective, year-round thermal control, The **Freedom Smartblind** is the best solution for deflecting heat in summer, whilst retaining the warmth during the winter months.

The **Smartblind** can be made using full block-out or translucent fabric. As the fabric is fully encased into the track, there are no gaps for the light to get through, making them perfect for bedrooms and media rooms.

### INTERIOR USE:
